OBJECTIVE

Electronics and Computing undergraduate with hands-on leadership experience across three active technical societies, robotics teaching, and international competition representation. Combines technical grounding in embedded systems and AI with strong communication and project execution skills, seeking to contribute to a forward-thinking technical team.

EDUCATION

B.Eng. Electronics and Computing | COMSATS University, Lahore *Sep 2024 – Jul 2028 (In Progress)*
Core Focus: Artificial Intelligence · Human-Computer Interaction · System Design

Intermediate — Computer Science *Aug 2022 – May 2024*
Networking, Database Management (SQL), Cybersecurity Fundamentals

Matriculation — Computer Science *Jul 2020 – May 2022*
HTML · Python · C · C++ | Problem-solving & logic foundations

WORK EXPERIENCE

Product Management & Agentic AI Intern | Glosix Systems *Jul 2026 – Aug 2026*

- Delivered a complete IT capstone project from initiation to closure, as measured by successful panel evaluation, by developing a Project Charter, WBS, schedule, and risk register aligned with PMP and Google PM standards.
- Built core components of a multi-agent AI system, as measured by successful integration into a 4-agent architecture, by designing agent logic using LangChain, LangGraph, and Retrieval-Augmented Generation (RAG) pipelines.
- Improved system reliability and safety, as measured by passing end-to-end evaluation testing, by implementing memory persistence, guardrails, and tool-based function calling.

Robotics Club Teacher (Contract) | PakTurk Maarif International Schools and Colleges *Oct 2025 – Apr 2026*

- Improved problem-solving confidence among Grades 1–8 students, as measured by successful completion of end-to-end Arduino project cycles, by designing and delivering project-based computer science and electronics curricula.
- Enabled students to build fully functional systems from scratch by mentoring senior cohorts through hands-on, project-based learning.
- Bridged abstract circuit theory with practical understanding for younger cohorts by introducing tangible, hands-on experimentation exercises.

Project Leader | PakTurk Maarif International Schools and Colleges *Sep 2019*

- Delivered a functional automated resource-efficiency system, as measured by successful field demonstration, by leading development of a smart drip irrigation system applying automation and electronics concepts.
- Represented Pakistan on an international stage, as measured by selection at TEKNOFEST Turkey, by showcasing the completed irrigation project to a global competition audience.
- Hosted annual school events, as measured by consistent turnout and positive feedback, by planning and leading programming for school-wide celebrations.

PROJECTS

Smart Glasses for Accessibility | University Group Project

- Enabled hands-free lighting control for individuals with disabilities, as measured by successful clap-triggered response, by co-designing wearable smart glasses that detected clap sounds to turn lights on and off.

Wastewater-to-Electricity Generator | University Project

- Converted discharged water into usable electrical power, as measured by successful power generation demonstration, by designing a system where outgoing water pressure drove a motor, transforming mechanical energy into electrical energy.

Flappy Bird Game | Personal Project

- Built a fully playable clone of the classic Flappy Bird game, applying core programming logic and game-development fundamentals.

LEADERSHIP & ACTIVITIES

Tech Lead | STEM Fusion Society — COMSATS Lahore Mar 2025 – Present

- Delivered coordinated technical modules for Hack The Box across three Pakistani universities, as measured by successful execution, by liaising directly with foreign organizers as Head of Modules.
- Kept senior stakeholders informed on event progress, as measured by consistent reporting cadence, by overseeing on-campus execution and producing technical and progress reports.
- Ensured seamless event logistics, as measured by zero major cross-team delays, by fostering close cross-departmental collaboration.

Marketing Chief | RAS Robotics Society (IEEE Pakistan Chapter) Sep 2025 – Present

- Secured brand sponsorships including Crumble and Cheezious, as measured by signed partnership agreements, by leading marketing strategy for an IEEE-affiliated robotics society.
- Grew society visibility and participant engagement by managing event modules, logistics, and marketing campaigns for robotics competitions.

Team Member — Graphics & Registrations | COMSATS Lahore Debating Society Feb 2025 – Present

- Increased event visibility and drove large-scale participant turnout by creating targeted promotional materials.
- Maintained accurate records and smooth participant onboarding, as measured by error-free registration data, by managing end-to-end registration workflows.

CERTIFICATIONS

Data Analytics Job Simulation | Deloitte (via Forage) Jul 2026

- Completed practical job-simulation tasks in data analysis and forensic technology.

Cambridge English Qualification 2016

- Achieved a strong result in the Cambridge English exam, demonstrating advanced proficiency at middle-school level.

SKILLS

Technical: Arduino · SQL · HTML · Python (Basic) · C / C++ · MS Office Suite · AI Productivity Tools
Professional: Technical Writing · Team Leadership · Event Management · Cross-functional Collaboration · Problem-solving
Languages: English (Fluent) · Urdu (Native) · Mandarin (Learning)

INTERESTS & HOBBIES

Embedded systems & AI tools exploration · Learning programming and spoken languages · True crime literature & podcasts
